

Ruoyu (Chloe) Xu

412-224-3045 | ruoyux@andrew.cmu.edu | www.linkedin.com/in/chloeruoyuxu

EDUCATION

Carnegie Mellon University, Heinz College, Pittsburgh, PA

8/2025 - 12/2026

Master of Information Systems Management - Business Intelligence and Data Analytics

GPA: 3.70/4.00

Relevant Coursework: A/B Testing, Applied Econometrics, Advanced Business Analytics, Intermediate Database Management, Data-Focused Python, Telling Stories with Data

Xi'an Jiaotong-Liverpool University, International School of Business, Suzhou, China

9/2021 - 7/2025

Bachelor of Management in Information Management and Information Systems

GPA: 3.82/4.00

Award: University Academic Excellence Award - top 5% for three consecutive years (2022-2025)

PROFESSIONAL EXPERIENCE

Microsoft, Edge Mobile Group, Suzhou, China

7/2024 - 3/2025

Product Manager Intern

- **Behavioral Analysis & Product Launch:** Diagnosed settings-discoverability issues using behavioral data from 3M+ users, three months of support tickets, eight competitor benchmarks, and a 20-user usability study; after launch, related complaints fell 22% and module exit rate decreased approximately 16%
- **Growth Opportunity Analysis:** Analyzed 300M+ U.S. mobile browsing records across retention, engagement, and market penetration to identify high-retention but underpenetrated sports and entertainment segments; recommendations informed event-based initiatives added to the engineering roadmap

Tesla, Sales and Delivery Department, Shanghai, China

1/2024 - 3/2024

Business Analyst Intern

- **Sales Funnel Reporting:** Automated intraday and weekly funnel reporting across 30+ Shanghai stores, reducing preparation time from more than four hours to approximately one hour and improving visibility into leads, test drives, orders, and deliveries
- **Pop-Up Site Planning:** Combined sales, target-customer, geographic-coverage, and competitor-location data from 7–8 automotive brands using Python and Power BI, supporting site selection for three suburban pop-up locations

Xiaohongshu, Shanghai, China

8/2023 - 12/2023

Data Product Intern

- **Model Evaluation and Retraining:** Built a category-level evaluation framework covering thousands of sentiment and classification outputs per category; translated recurring failures into revised annotation rules and retraining inputs, improving offline accuracy for an underperforming category from approximately 60% to 83%
- **Root-Cause Analysis:** Investigated an anomalous decline in a brand's positive-sentiment metric and traced it to entity-disambiguation errors rather than a genuine perception shift, leading to new rules that separated brand mentions from unrelated events.

PROJECT EXPERIENCE

AnyInt - AI Gateway, Entrepreneurial Startup Team

5/2026 - 9/2026

Product Lead

- **Product Discovery & Prioritization:** Synthesized interviews with approximately 50 AI practitioners and analysis of 8–10 competing platforms to identify model-selection complexity and fragmented cross-model workflows as key adoption barriers; findings informed the prioritization of Smart Routing and a multimodal Chatroom
- **Smart Routing Evaluation:** Designed and evaluated a routing system using 10,000 cases across five task categories, achieving 96% intent-and-difficulty accuracy, an 82% Top-2 Oracle Hit Rate, and 90% non-regression while reducing inference cost by approximately 53% versus the best single-model baseline
- **Reliability Analysis & Launch:** Translated pilot feedback on model and endpoint failures into prioritized reliability requirements and partnered with engineering to launch provider fallback with endpoint-health monitoring, same-model failover, and cross-model recovery

AI Disclosure A/B Experiment, Carnegie Mellon University

4/2026 - 5/2026

Team Leader

- **Experiment Design:** Co-designed a randomized between-subjects experiment in Qualtrics, assigning 85 graduate students to AI- or career-attributed versions of identical advice and measuring perceived credibility, expertise, relevance, and sharing intent
- **Treatment-Effect Analysis:** Conducted covariate-balance, power, and treatment-effect analyses, finding a statistically significant 0.99-point decline in perceived expertise for AI-attributed advice; tested and rejected LLM-generated sample augmentation after synthetic responses failed to preserve the observed treatment effect

SKILLS

Product Analytics: KPI & Metric Design, Funnel Analysis, Retention & Engagement Analysis, Segmentation, Behavioral Analysis, Root-Cause Analysis

Experimentation & Evaluation: A/B Testing, Experiment Design, Statistical Inference, Power Analysis, Treatment-Effect Analysis, Model Evaluation, Slice-Based Failure Analysis

Programming & Visualization: SQL, Python (pandas, NumPy, scikit-learn), Power BI, Tableau, Excel, Qualtrics
